

NUKI BOX DATA SHEET

Nuki Box

Transforms your intercom into a smart door lock

NUKI

Installed invisibly behind the panel of the intercom system, the Nuki Box also allows efficient remote administration of electronically controlled entrance doors. Comfort and security for house residents and sustainable process improvements for property management are in the focus of this solution.

The Nuki Box is designed as a retrofit solution and can be easily integrated into the existing door opening system. It is mounted invisibly behind the existing intercom panel where it operates the door opener. No complicated reconstruction work is required during the installation.

Equipped with a permanent internet connection and Bluetooth, the Nuki Box transforms existing doors into intelligent access systems. After installing the Nuki Box, home entrance doors can be controlled via the Nuki App and authorizations can be managed easily via the Nuki Web platform. As a result, the Nuki Box offers secure and uncomplicated key management, thus enhancing not only the value of the property, but also the comfort of its residents.

At the same time, the Nuki Box creates new opportunities in real estate management as processes are sustainably simplified and made more efficient. Property managers can control the door from the distance via Nuki Web, allocate short-term access permissions to service providers and check the log of the lock actions from anywhere at any time.

Benefits

- Quick and easy installation
- Low initial and maintenance costs
- Efficient remote control
- Software tool for easy administration of authorizations
- Compatible with IFTTT, Amazon Alexa and Google Home

Technical Specifications

Weight & Product Dimensions:

Nuki Box incl. GSM antenna

Weight: 82g

Dimensions: 88 x 60 x 20 mm

Power Supply:

DC or AC

(10-36V)

Requirements:

Electronically controlled locking system
(Normally open)

Communication:

Bluetooth Low Energy

GSM

Wi-fi

Operating Options:

Open door

Auto Unlock
