Faster - stronger - better: Nuki presents new Fob

With improved signal strength, increased responsiveness, and faster connectivity, you can now lock up to 100 Smart Locks with your Nuki Fob.

Graz, February 2018 - The Graz-based company Nuki presented the new Bluetooth Fob in revised design today. The new generation of the Nuki Fob has been substantially improved: The data transfer between Nuki Fob and Nuki Smart Lock has been accelerated six times. The stronger Bluetooth signal allows users to control their Smart Lock from a distance of up to 15 meters. The smart new Bluetooth Fob can now lock for up to 100 authorized Smart Locks - a significant advantage, not only for business customers. In addition to the technological advances, the developers of Nuki have also optimized the material properties: The new Nuki Fob is shock resistant and waterproof. That turns the Nuki Fob into the ideal companion for outdoor activities, children and seniors.

Practical alternative to the smartphone

The new Nuki Fob is presented in a modern design: Thanks to its pleasant feel and handy shape, it can easily be stored in any pocket or attached to your key ring. The improved material properties increase the stability and durability of the Nuki Fob: The new generation is certified to IP 65 standards - thus the penetration with dust and water spray is no problem for the Nuki Fob. By unlocking and locking via the touch of a button, the Nuki Fob is the ideal alternative for people who do not use a smartphone, such as children or seniors. By simply passing on a Nuki Fob to the cleaning person, the babysitter or the neighbor, the tedious management of spare keys is finally a thing of the past.

Faster – stronger – better

Not only visually, the Nuki Fob has received an upgrade: On the technical side, the data transfer between fob and smartphone got improved: The responsiveness got substantially increased compared to the previous model. Thanks to the improved Bluetooth communication, the range has been tripled. This means that Fob users can now unlock their Smart Lock from a distance of up to 15 meters, depending on the structural conditions of their building. In addition, the new Fob reacts much faster and more reliable.

Lock any number of doors

The new Nuki Fob can be authorized for up to 100 Smart Locks - conversely, 100 authorizations can be granted for a Smart Lock. This fact makes the handy companion also an interesting alternative for the use of Nuki in enterprises. To maximize the durability, Nuki has optimized the Fob's battery life. Thanks to numerous improvements, up to 60,000 locking processes can be done with one battery of a Nuki Fob - this corresponds to a battery life of around ten years. If a Fob gets lost, the corresponding access authorization can be deleted at any time via the Nuki App or Nuki Web. *"We are pleased to be able to present our first product highlight this year with the Nuki Fob. As with all our developments, we oriented the development along the wishes and feedback of the community,"* explains **Martin Pansy**, CEO Nuki Home Solutions.

Prices and availability

The new Nuki Fob costs 39 euros including VAT and is now available in the Nuki webshop at <https://nuki.io/en/shop/>

. Further information also under <https://nuki.io/en/bluetooth-fob/>.

About Nuki Home Solutions

Nuki Home Solutions is Europe's leading provider in upgradable, smart access solutions. The company's goal is to make existing door locks intelligent and therefore replace the physical key. The current product portfolio contains the Nuki Combo, consisting of the Nuki Smart Lock and the Nuki Bridge as well as the Nuki Box - a retrofit solution for apartment blocks. Nuki Home Solutions was founded by Up to Eleven in 2014. Manager of Nuki Home Solutions is Martin Pansy. See for further information: <https://nuki.io/en/>
