

NUKI KEYPAD

DATA SHEET

Nuki Keypad

Access via entry code - Simply for everyone

Open the door to a keyless life - with the Nuki Keypad. Create personal entry codes for family members, friends or guests to grant them easy access without a conventional key or smartphone.

The Nuki Keypad is the perfect accessory for a keyless life. The risk of hiding keys under the doormat is finally a thing of the past! Now you can grant friends and acquaintances access to your home by assigning them individual entry codes through the Nuki App or Nuki Web.

Highest compatibility and easy installation

The Nuki Keypad can be used with any Nuki Smart Lock. Installation is easy: simply glue the Keypad to the door frame or screw it to the wall next to your front door. No wiring is necessary, as the Nuki Keypad is battery powered. With the optional Nuki Bridge, entry codes can also be created remotely. Due to Bluetooth communication, the Nuki Keypad can also be used without Internet connection.

Security and convenience

Maximum security is ensured by 6-digit entry codes and encrypted communication. Every Keypad can store up to 100 different entry codes. Every user has an individual entry code, so the activity log can be checked at any time to see who opened the door, and at what time.

Perfect for holiday rentals

With the Nuki Keypad, the property owner no longer has to hand over the keys, and guests are granted simple and secure keyless access - even if they don't have a smartphone. The validity of the access codes can naturally be limited to the time that the guests are staying.

Technical specifications

Product dimensions:
90 x 30 x 15 mm

Weight incl. button-type batteries:
30g

Power supply:
2xCR2032 batteries (included)

Communication:
Bluetooth 5.0

Bluetooth range:
5 to 10 metres, depending on building structure

Security:
6-digit access code
end-to-end encryption with challenge-response authentication procedure (similar to online banking)

Protection class:
IP65 (dust proof and water resistant)

Compatible with:
iOS, Android, Nuki Web
