NUKI

THE DIGITAL ACCESS SOLUTION FOR EMERGENCIES

THANKS TO NUKI YOU DO NOT NEED TO WORRY ABOUT...

- Key management and key deposit
- Time-consuming door openings by third parties in case of emergency
- Cylinder exchange due to lost keys
- Unforeseeable sick leaves
- Time-consuming key handovers

OUR SOLUTION:

SOS

1. EMERGENCY CALL
The resident triggers the emergency call via the medical alert system.

2. EMERGENCY SERVICES
The emergency services are contacted by the emergency call centre and make their way to the scene of the emergency.

3. REMOTE OPENING
The emergency services authenticate themselves on-site and the emergency call centre unlocks the door remotely.

IN EMERGENCIES EVERY SECOND COUNTS

The Nuki Smart Lock allows easy access to the living space of people in need of care and turns the smartphone into a key.

Designed as a retrofit solution, the Smart Lock is installed on the inside of the door over the existing cylinder within a few minutes – without screws or drilling.

Thanks to the open API, Nuki's features can be integrated into other software solutions.

COST SAVINGS
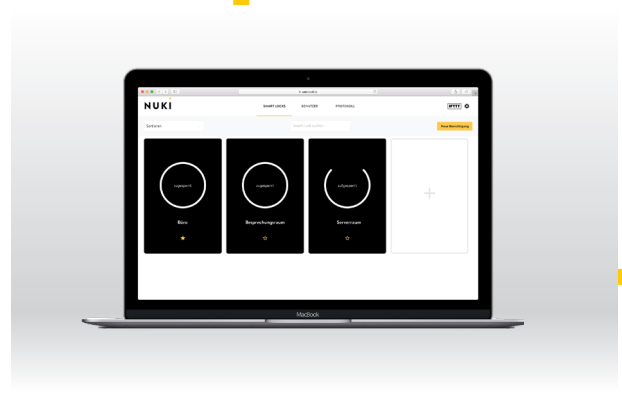

SECURITY CONTROL

TIME EFFICIENCY

KEY MANAGEMENT

NUKI COMBO (CONSISTING OF NUKI SMART LOCK AND NUKI BRIDGE)

- ¬ Physical keys get replaced by a combination of hard- and software
- ¬ Remote control via Nuki app or Nuki Web
- ¬ No need to worry about lost keys

NUKI WEB

- ¬ Easy management tool for entry codes
- ¬ Create and manage access permissions
- ¬ Detailed tracking of all locking activities

ADVANTAGES

SMART

- ¬ Remote opening of the door
- ¬ Elimination of time-consuming door openings by locksmiths, fire brigade or the police
- ¬ Open API for easy integration

SIMPLE

- ¬ Retrofittable - easy 3-minute self-installation on the inside of the door without screwing or drilling
- ¬ Management of access permissions via the Nuki app or the Nuki Web

SECURE

- ¬ Fast and secure access in case of emergency
- ¬ Security and safety confirmed by experts

BEST PRACTICE   HOW IT WORKS

The Hel-Wacht Group has integrated Nuki's API into its sofware "myStella", a mobile home emergency call system, which allows open doors remotely.

- ¬ In case of emergency, the person makes the emergency call via the medical alert system.
- ¬ The emergency services are contacted by the emergency call centre and make their way to the scene of the emergency.
- ¬ During the drive, the helpers receive a password.
- ¬ The emergency services authenticate themselves on-site with the password and the emergency call centre unlocks the door remotely.
