

NUKI SMART LOCK 2.0

DATA SHEET

ONE SMART LOCK FOR ALL

The Nuki Smart Lock transforms existing door locks into digital access systems and turns your smartphone into an intelligent key. No modifications are required before fitting a Nuki. The electronic door lock is simply mounted on top of the existing cylinder on the inside of the door and can even be removed without leaving any traces if required, so it is also ideally suited to rental properties.

YOUR ADVANTAGES

- Replaces the physical key with a smartphone app
- Automatically locks the door at specified times
- Thanks to the new door sensor, you will always be able to see whether the door is also actually closed
- Maximum flexibility through the simultaneous assignment of up to 200 individually-adjustable access authorisations
- With the optional accessories (Nuki Keypad, Nuki Fob), the Nuki Smart Lock can also be used by people who don't have a smartphone
- The most flexible Smart Lock in Europe when it comes to integration into existing smart home systems (in conjunction with the Nuki Bridge)

BRAND NEW

APPLE HOMEKIT

Apple HomeKit integration means that the Smart Lock can now be controlled with Siri, managed with the Apple Home app and incorporated in HomeKit Scenes.

NUKI DOOR SENSOR

The new door sensor allows you to see not only the status of the lock cylinder, but also of the door.
