

PRESS RELEASE

No more keys: Nuki opens the door to helping hands

Graz (Austria), 14 June 2023

- **Vacation time at last! Installing a Nuki Smart Lock before your long-awaited getaway means you won't have to worry about keys anymore.**
- **Cats have to be fed, plants watered, and mail brought in. With Nuki those you trust can enter your home securely – and your keys can't get lost.**
- **Customized and, if desired, time-limited digital permissions enable household helpers or other trusted individuals to enter your home, securely and conveniently.**

The Nuki Smart Lock can be mounted on the inside of your door in just a few minutes without damaging it. The powerful motor rotates the key in the lock. If desired, the system can be controlled entirely locally using only Bluetooth. For remote access, the Smart Lock connects to your router at home – either using a separate Nuki Bridge or the integrated WiFi in the Nuki Smart Lock 3.0 Pro. The Smart Lock is opened automatically upon approach (Auto Unlock), via smartphone or smartwatch app or by using the old key, which still works. Nuki offers accessories like the Fob, a convenient remote control as a key replacement, as well as the Keypad and Keypad 2.0. Both Keypads enable you to open the door using a six-digit code; the Keypad 2.0 also has a fingerprint sensor.

Who's allowed inside and when?

While keys that have been lent out can be used at any time and by anyone, digital keys can be restricted in time. Of course, you can grant full access to, for example, family members and other trusted individuals at any time, day or night. But if the dog sitter comes every Monday afternoon, it is perfectly sufficient for the permission to only be valid during that specific time frame. Or, if you have a neighbor who can check on things while you're away, granting them access for the duration of your vacation is sufficient. If your Smart Lock is connected to the Internet, permissions can also be granted and revoked remotely.

Always in control

The Smart Lock is only under the complete control of the owners, who can revoke permissions just as quickly as they were granted. When a permission is created, a code is generated. This code can only be redeemed once and only within 48 hours. Afterwards, the code is useless. For those who want to be absolutely certain that only the authorized person has access, the Nuki Keypad 2.0 with fingerprint scanner is the perfect solution. The activity log in the Nuki app shows you who opened the front door and when, recording every door opening and closing if desired.

Cheaper as a bundle

Choosing a bundle of Smart Lock and accessories right from the start is the best way to save money. For example, you can save almost 60 Euros when you buy the Nuki Smart Lock 3.0 Pro and the Keypad 2.0 as part of the [Home Set Pro](#) versus buying them individually.

About Nuki Home Solutions GmbH

Nuki was founded in 2014 by the brothers Martin Pansy (CEO) and Jürgen Pansy (Chief Innovation Officer) in Graz. Since its market launch in 2016, the company has grown steadily and is now the leading provider of smart, retrofittable access solutions in Europe. Currently, 120 people are employed at the Graz site. In addition to the established Smart Lock produced in Europe and a comprehensive range of accessories and services, Nuki is working hard on the further development of smart access solutions for a completely keyless future.
